

200 SERIES 0 to 3,000 PSIG H200 SERIES 0 to 6,000 PSIG CHECK VALVES

Features

- Quick Opening / Positive Closing
- Large Flow Capacity
- Zero Leakage
- Floating o-ring

Benefits

- Provides a wide range of adaptability.
- The patented sealing principle effects complete leakproof closing under all pressure conditions.
- Compact, easy installation. Efficient inline piston reduces size and weight.
- The streamlined poppet and full ports offer minimum restriction to flow.

Technical Data

Body Construction Materials:	• Aluminum, Brass, Steel, 303 or 316 Stainless Steel
O-ring Materials:	• Buna N, Ethylene Propylene, Fluorosilicone, Neoprene, Teflon® and Viton®
Operating Pressure:	• 200 Series – to 3,000 PSIG (207 BAR) H200 Series – to 6,000 PSIG (414 BAR)
Proof Pressure:	• 1-1/2 times operating pressure
Rated Burst Pressure:	• 2-1/2 times operating pressure
Cracking Pressure:	• 0.1 to 25 PSIG (0.007 to 17.2 BAR)
Temperature Range:	• -320° F to +550° F (-196° C to +288° C) Based on o-ring material, see "How to Order"
Connection Sizes:	• 1/8 inch to 2 inch

How It Works

OPEN

Full flow passages offer minimum restriction to flow. Spring is completely removed from flow path.

CLOSING

Floating o-ring automatically establishes line contact with conical metal surfaces of poppet and seat to cushion closing and insure perfect sealing.

CLOSED

O-ring only seals. Full pressure load is carried by metal-to-metal seat. Increasing pressure increases sealing efficiency; metal seat prevents any possibility of deformation or extrusion of o-ring.

NOTE: Proper filtration is recommended to prevent damage to sealing surfaces.

200 SERIES 0 to 3,000 PSIG

H200 SERIES 0 to 6,000 PSIG

CRACKING PRESSURE

MINIMUM CRACKING PRESSURE AVAILABLE - 0.1 PSI

MAXIMUM CRACKING PRESSURE AVAILABLE - 25 PSI

NOTE: Cracking pressure is defined as pressure at which flow is 5cc/min. except for 220 Series for which flow is approximately .02 cfm. When ordering a cracking pressure within the standard range or below the standard range of cracking pressure, the dash number is a "maximum." Example: 259A-4TT-.3 (C.P. tolerance will be +0%, -50%). When ordering a cracking pressure equal to or greater than the upper limit of the standard C.P. shown above, C.P. tolerance will be $\pm 10\%$. Example: 259A-4TT-5. Cracking pressures over 8 psi should not be specified without consulting the factory. Where 200 Series valves are supplied with higher cracking pressures, a shroud ring may be used to confine the o-ring.

LEAKAGE

External	Zero
Internal	
Elastomeric Seals	Zero
Teflon® Seals	0-50 psi 5cc/min max
	50+ psi .5cc/min max

For cracking pressures less than standard, consult the factory for leakage rates.

* For Teflon® specify stainless steel body material. The stainless steel valve design provides a Teflon® static seal for use in systems with low or high temperatures or with liquids or gases which would cause excessive swell or shrinkage of elastomeric compounds.

Kalrez® and Viton® are registered trademarks of DuPont Dow Elastomers. Teflon® is a registered trademark of the DuPont Company. Gyrolok® is a trademark of HOKE, Inc.

Please consult your Circle Seal Controls Distributor or the factory for information on special connections, operating pressures and temperature ranges.

For Your Safety

It is the sole responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation and maintenance of these products. Material compatibility product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

Repair Kits:

In normal service the only part(s) which may require replacement is(are) the seal(s). A repair kit may be ordered by placing a K/ in front of the complete part number (i.e. K/H249T1-4TT(L)-1).
